

JOB DESCRIPTION

Job Title	Software Engineer in Test
Department	R&D
Location	Theale, Berkshire, UK
Reporting to	Team Leader, Analytics & Reporting

About Clearswift

Clearswift is trusted by organizations globally to protect their critical information, giving them the freedom to securely collaborate and drive business growth. Our unique technology supports a straightforward and 'adaptive' data loss prevention solution, avoiding the risk of business interruption and enabling organizations to have 100% visibility of their critical information 100% of the time.

As a global organization, Clearswift has offices in the United States, Europe, Australia and Japan, with an extensive partner network of more than 900 resellers across the globe.

More information is available at www.clearswift.com

Clearswift Values

Show *passion* in what we do, drive for *innovation* in everything we do and continuously *collaborate* to make a difference.

The Role

Reporting is an important element of Clearswift products that provides visibility of email and web traffic, as well as endpoint events. For day-to-day operation of our products, this provides valuable insight into the level of policy compliance and violations within an organisation. The Analytics and Reporting Team will increase the usability, flexibility and depth of reports offered, and improve the scalability of the reporting feature in the Clearswift products.

Analytics and Reporting will identify a suitable reporting package that can be integrated into the products, offering aesthetically pleasing visualisations based on pre-defined reports and allowing generation of custom reports that supplement the pre-defined ones. The team will both rebuild and extend the existing set of reports to add genuine business value for customers in terms of monitoring compliance with industry regulations and local acceptable usage policies, by combining the data collected from all Clearswift products and extending the data that is collected if required.

The A&R team will improve the scalability of the current reporting solution, increasing the data retention period and minimising the impact on email and web traffic throughput, by redesigning the current solution to meet the needs of both small

customers that require a one-box solution and enterprise customers that would prefer to dedicate a separate server specifically for reporting purposes.

Key Responsibilities

- Providing excellent technical contributions
 - Solid technical experience is required to analyse, design and implement model software solutions that are maintainable and reusable
- Champion quality and testing across R&D to improve processes and adopting best practices
 - Reviewing successes and identifying issues to innovate process solutions and align best practices
