

Cyber Training Academy Information Security Courses

Information Security has become a very broad topic, however there is frequently a need for recognized training to comply with regional legal and regulatory standards. Information Security Courses from RUAG offer professional trainers that are in their fields that provide up-to-date examples from recent assignments to help bring the subject to life and make it applicable in any organization.

Business Challenges

While many organizations recognize the need for regular Information Security Training, the practicalities often limit its effectiveness. While Information Security is fundamentally the same for all, organizations differ and so standardised training becomes less effective. Fully customised training courses can be overly expensive and take time to develop and deliver. Information Security Management Systems offer the best return if they are fully understood and optimized for use, whether it is for ISO 27001, GDPR or compliance with other regulations. However, IT departments seldom have enough time to discover all the features and optimizations for themselves.

Solution

RUAG Cyber Security Services offers Information Security Training based on an organizations business. The courses are built on best practice and customized to the organization. They are designed to expand expertise and raise awareness specifically around helping an organization implement an Information Security Management System (ISMS) for compliance with standards such as ISO 27001 or the EU General Data Protection Regulation (GDPR).

By using the same consultants who support the installation of ISMS and GDPR compliance, attendees benefit from the latest thinking from the field by those who have practical day-to-day experience of the real world issues IT departments face.

Key Features and Benefits

- Independent training is delivered by certified experts with up-to-date practical experience in the field
- On-site or off-site training options
- Best Practice training material adapted and customized based on the organization and sector it operates in
- Specialized courses for Chief Information Security Officers (CISOs)
- Skills transfer around best practice Information Security
- Higher staff awareness of security related issues
- Compliance with legal and regulatory requirements for cyber security training
- Improved use and effectiveness of an ISMS through better understanding of certification processes
- ISMS implementation and maintenance courses
- ISO 27001 ISMS courses
- Data protection awareness courses

Scenarios

Information Security Management System Optimization

Investing in an Information Security Management System (ISMS) takes both time and resources. Specialist training can ensure the solution is optimised to deliver exactly what it needs to in the ever-changing environments that IT departments work in.

ISO 27001 Compliance

Compliance with standards such as ISO 27001 can be achieved more quickly with customized training based on best practice, delivered by experts with up-to-date real-world experience.

GDPR Compliance

Compliance with the new EU General Data Protection Regulation has become a Board Room topic for all businesses dealing with EU Citizens. Effective training using specialists ensures all the training requirements can be met with minimal disruption.

Increasing Security Awareness

Building a corporate culture around protecting information can be challenging. By using experts who customize courses based on best practice, security awareness levels can be raised across all employees. In person training with examples of where things have gone wrong create an environment where lessons learned become lessons remembered.

Pricing

Pricing is dependent on the scope of the course required and can vary from 1 to 5 days.

Why RUAG Cyber Security Services

RUAG Cyber Security Services have grown out of high profile engagements with the Swiss Government, operating in highly secure environments with specialist personnel. A consistent approach to projects of all sizes ensures a high-quality, on-time, on-budget deliverable which is tailored to the customer's specific needs.

Customers for Cyber Academy Courses include government departments, manufacturers, engineering services, telecommunication providers, software development businesses and energy providers.
